

Make a Map of Yosemite

tmap is a package for making thematic maps. In this Notebook, we'll use tmap to make a map that includes the Yosemite:

- park boundary
- roads

Campsites

- cell towers
- · campgrounds

We'll make two versions of the map - a traditional static map and an interactive map.

Import all the layers

First, import the park boundary, cell towers, and roads. At the same time, we'll (re)project everything into UTM 11N WGS 84.

```

CHALLENGE: How many cell towers & campgrounds

How many cell towers are there? How many campgrounds are there? Answer

```
Hide
nrow(yose_celltwrs_utm)
[1] 5
                                                                                                                Hide
nrow(yose_campgrounds_utm)
[1] 15
```

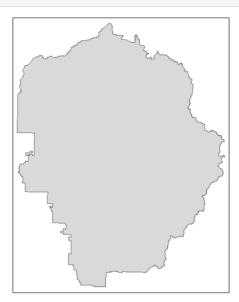

Map the Park Boundary

Let's start with a simple map of just the park boundary:

```
Hide
library(tmap)
Registered S3 method overwritten by 'htmlwidgets':
 method
                 from
 print.htmlwidget tools:rstudio
The legacy packages maptools, rgdal, and rgeos, underpinning the sp package,
which was just loaded, will retire in October 2023.
Please refer to R-spatial evolution reports for details, especially
https://r-spatial.org/r/2023/05/15/evolution4.html.
It may be desirable to make the sf package available;
package maintainers should consider adding sf to Suggests:.
The sp package is now running under evolution status 2
     (status 2 uses the sf package in place of rgdal)
                                                                                                              Hide
```

```
tmap_mode("plot")
tmap mode set to plotting
```

tm_shape(yose_bnd_utm) + tm_polygons()

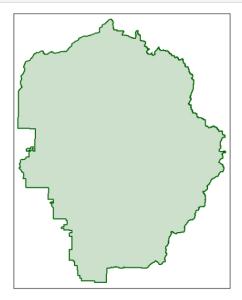

Now make the fill and outline dark green, the fill 20% transparent (alpha = 0), the border line a little thicker (lwd = 2):

```
tm_shape(yose_bnd_utm) +
tm_polygons(col = "darkgreen", alpha = 0.2, border.col = "darkgreen", lwd = 2)
```

Hide

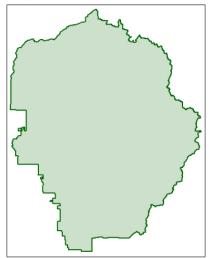

Hide

Next, we'll add a title by adding tm_layout() to our tmap object:

```
tm_shape(yose_bnd_utm) +
tm_polygons(col = "darkgreen", alpha = 0.2, border.col = "darkgreen", lwd = 2) +
tm_layout(main.title = "Yosemite NP Cell Towers")
```

Yosemite NP Cell Towers

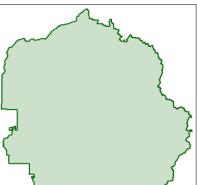

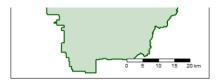

CHALLENGE: Add a scale bar

Add a scale bar to the map. Hint: add tm_scale_bar() to the map. Answer

```
tm_shape(yose_bnd_utm) +
  tm_polygons(col = "darkgreen", alpha = 0.2, border.col = "darkgreen", lwd = 2) +
  tm_layout(main.title = "Yosemite NP Cell Towers") +
  tm_scale_bar()
```

Yosemite NP Cell Towers

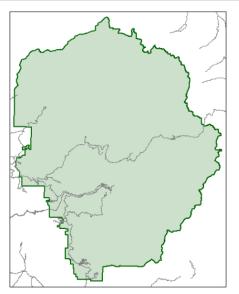

Add the Roads and the Cell Towers

Next we'll add the roads. This requires tacking on another <code>tm_shape()</code> , followed by a function that draws lines.

```
tm_shape(yose_bnd_utm) +
  tm_polygons(col = "darkgreen", alpha = 0.2, border.col = "darkgreen", lwd = 2) +
  tm_shape(yose_roads_utm) +
  tm_lines(col = "gray50")
```

In a similar fashion, we'll add the cell towers as little blue dots:

```
tm_shape(yose_bnd_utm) +

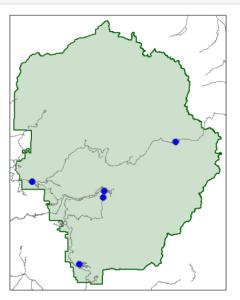

tm_polygons(col = "darkgreen", alpha = 0.2, border.col = "darkgreen", lwd = 2) +

tm_shape(yose_roads_utm) +

tm_lines(col = "gray50") +

tm_shape(yose_celltwrs_utm) +

tm_symbols(col = "blue", size = 0.5)
```

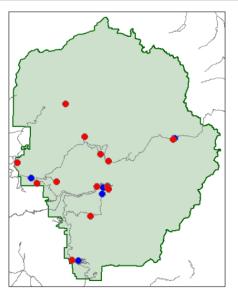

CHALLENGE: Add the campgrounds

Add the campgrounds to the map as little red dots. Hint: you can render point layers with tm_symbols() or tm_dots(). Answer

```
tm_shape(yose_bnd_utm) +
  tm_polygons(col = "darkgreen", alpha = 0.2, border.col = "darkgreen", lwd = 2) +
  tm_shape(yose_roads_utm) +
  tm_lines(col = "gray50") +
```

Hide

```
tm_shape(yose_celltwrs_utm) +
  tm_symbols(col = "blue", size = 0.5) +
tm_shape(yose_campgrounds_utm) +
  tm_symbols(col = "red", size = 0.5)
```

Make an interactive map

Note: interactive maps created by tmap can cause problems when you save a R Notebook to HTML. It is recommended that you run the following code in an R script rather than a Notebook.

We can switch to 'interactive map mode' by running tmap_mode():

```
## tmap_mode("view")
## tmap_mode("plot") # go back to plot mode
```

Now that we're in 'view' mode, tmap objects be rendered as little interactive maps. We can 'redraw' the last tmap object using tmap_last():

```
tmap_last()
```

Switch-out the basemap:

```
tm_shape(yose_bnd_utm |> st_geometry()) +
  tm_polygons(col = "darkgreen", alpha = 0.2, border.col = "darkgreen", lwd = 2) +
  tm_shape(yose_roads_utm |> st_geometry()) +
  tm_lines(col = "gray50") +
  tm_shape(yose_celltwrs_utm |> st_geometry()) +
  tm_symbols(col = "blue", size = 0.5) +
  tm_shape(yose_cempgrounds_utm |> st_geometry()) +
  tm_symbols(col = "red", size = 0.5) +
  tm_shape(yose_cempgrounds_utm |> st_geometry()) +
  tm_symbols(col = "red", size = 0.5) +
  tm_basemap("Esri.WorldTopoMap")
```

Configure Pop-ups

Lastly we'll disable interactivity (i.e., hover-over text and popup windows) on all layers except for the campgrounds:

```
tm_shape(yose_bnd_utm |> st_geometry()) +
  tm_polygons(col = "darkgreen", alpha = 0.2, border.col = "darkgreen", lwd = 2, interactive = FALSE) +
  tm_shape(yose_roads_utm |> st_geometry()) +
  tm_lines(col = "gray50", interactive = FALSE) +
  tm_shape(yose_celltwrs_utm |> st_geometry()) +
  tm_symbols(col = "blue", size = 0.5, interactive = FALSE) +
  tm_shape(yose_cempgrounds_utm |> select(POINAME)) +
  tm_symbols(col = "red", size = 0.5, id = "POINAME") +
  tm_basemap("Esri.WorldTopoMap")
```

Tip: for more control over pop-ups, use leaflet.

End

Congratulations, you have completed the Notebook!

To view your Notebook at HTML, save it (again), then click the 'Preview' button in the RStudio toolbar.
